Let's Start!

The importance of information management.

Learning Outcome:

Describe common activities at work to a using short sentences in familiar spoken and written situations.

Interpret the requirements report to determine the technological needs in managing information, based on rules and protocols established by the company.

Can Do Statements:

- I can explain the concept of information management.
- I can give examples related to information management.
- I can identify the importance of information management for an enterprise.

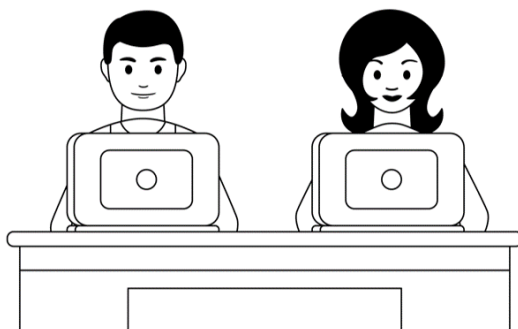

Ask your partner:

- Why do you think companies care for information management?
- What software do you know to manage information? What are its characteristics?

Let's Explore!

Why did you leave that early last night?

Instructions: Read the text below.

Louise: Hey, Bob! I saw you online very late last night.

Bob: Hi, Louise! Yes. Last night, I went online to research on information management.

Louise: Oh, I see. I guess that's the assignment for The Basics of Programming II, right? What did you find out?

Bob: Actually, I learned a lot. Information management is a key concept in requirement analysis. It is also a set of organizational activities that involve the acquisition, custodianship, distribution, and ultimate disposition of information. When we talk about information management, it also includes important actions such as organizing, planning, processing, structuring, evaluating, controlling, and reporting to meet the needs of functions that are the base of information.

Louise: Wow! That's a nugget of information. When did it all begin?

Bob: I decided to read up on that, and I found out that, in the 1970s, information management concerned things that now we call data management. They actually used magnetic tapes and punched cards! In the 80s and 90s, information management took a new form. Nowadays, it is essential for companies to focus on that. If they want to improve the efficiency of business processes to offer a better service, or if they want to implement new services to grow their brand, information management helps stakeholders handle and control inside information by deploying new technology. It's an essential issue.

Louise: What kind of new technology? Can you give me some examples?

Bob: Sure! Companies need to use the information management cycle to collect and communicate information within organizations. For example, companies employ content management systems, data warehousing, or portal applications for storage and disposal, making it easier for stakeholders, and those who need it, to access information for decision making. Information management overlaps with data management systems and technology.

Louise: Now I understand why you were online until late, you had to study a lot! Definitely, the internet is a gold mine of information.

Bob: That's right, Louise, information management is a very complex but necessary process for companies.

Let's Practice!

Some Examples of Information Management.

Instructions: Read the paragraph. Underline all the mistakes in the paragraph.

Information management is when a company employs content management systems and data warehousing to has access to the information effectively for decision making. Many companies use portal applications for the storage and disposal of information to lets stakeholders analyze it. There are people who are responsible for the safe disposal of information for permit that stakeholders have access to that information.

Let's Practice!

Information management has evolved.

Instructions: Read the sentences. Write the correct words to complete them.

1. Several years ago, information management _____ important for enterprises. Nowadays, it is a key focus for them.

☐ ☐
☐ ☐

Target Words

- **custodianship** (noun): the condition of having the custody of something
e.g. It is also a set of organizational activities that involve the acquisition, custodianship, distribution, and ultimate disposition of information.
- **deploy** (verb): to dispose; to arrange
e.g. If they want to implement new services to grow their brand, information management helps stakeholders handle and control inside information by deploying new technology.
- **overlap** (verb): to coincide with something
e.g. Information management overlaps with data management systems and technology.
- **employ** (verb): to use; to apply
e.g. Companies employ content management systems, data warehousing, or portal applications for storage and disposal.
- **read up on** (phrasal verb): to learn about
e.g. I decided to read up on that, and I found out that, in 1970s, information management concerned things that now we call data management.

Learning Points

Verbs with Infinitives and Infinitives of Purpose.

In English, there are some verbs that are followed with **infinitives** when we want to use them with other verbs.

Infinitives of purpose are verbs that follow the preposition **to** in order to express the purpose or intention of the action.

Examples:

*It is important to manage information in an organized way **to coordinate** processes effectively.*

*I collect requirements **to sort** them later.*

In the first example, we can see that the **reason** or **intention** to manage information is **to coordinate** processes effectively.

Let's discuss verbs with infinitives.

Verbs with infinitives are verbs that need the preposition **to** in order to introduce another verb. The second verb is in the infinitive form, while the first verb can be in any tense you need it.

Examples:

*We don't **need to implement** a new software.*

*They **planning to design** a new system.*

*I **have to sort** out the requirements.*

Not all verbs can be accompanied by **infinitives**. In the chart below, you can find some of the most common verbs followed by **infinitives**.

Verbs with Infinitives	
Need to	<i>We need to work on the system.</i>
Have to	<i>I have to collect all the requirements.</i>
Want to	<i>She wants to implement new software.</i>
Plan to	<i>We're planning to change the software design.</i>

Examples

- *Last night, I went online to research on information management.*
- *If they want to implement new services to grow their brand, information management helps stakeholders handle and control inside information by deploying new technology.*
- *I decided to read up on that.*

Idioms on Information.

Idioms are expressions people use to make speech more natural and informal. Each of the words in an idiom usually has a meaning that is different when you use it alone.

Idioms are expressions which cannot be predicted from the literal meaning of the words because they have a contextual significance.

There are many idioms related to technology. In the chart below, you can find some idioms related to communication and information.

Idioms with information	
<i>Nugget of information</i>	<i>Used when someone tells you something very interesting you didn't know</i>
<i>To worm information</i>	<i>To find out information from someone who is reluctant to talk about the subject</i>
<i>For your information</i>	<i>An expression you use to introduce a piece of information</i>
<i>Gold mine of information</i>	<i>Referring to someone or something that knows a lot about any topic</i>
<i>Inside information</i>	<i>Secret information that only a selected group of people know</i>
<i>Too much information</i>	<i>Used when someone tells you something private or embarrassing</i>
