- What kind of information can you organize in a chart or graphic? Give your partners some examples.

Can Do Statements:

- I can explain what a Gantt chart is.
- I give information about Gantt charts.
- I can describe the importance of Gantt charts.

Let's Explore!

Gantt charts are the answer!

Instructions: Read the text below.

Presenter: Are you working on a project, but you seem to have problems planning and organizing your work?

Client: Yes, ma'am.

Presenter: Here's the answer! Organize your project using a Gantt chart!
We can use Gantt charts to organize the tasks for a project's schedule, they include the starting point and the deadline of the tasks. Gantt charts consist of a bar chart expressing the work breakdown structure of a project. This is to say that a Gantt chart organizes every single task required to achieve the goal of a project in a diagram. In the past, Gantt charts only summarized the elements of a project, while modern charts show the expected time for a task to finish; the optimistic, realistic, and pessimistic due time; the relation among tasks and their progress in percentages.

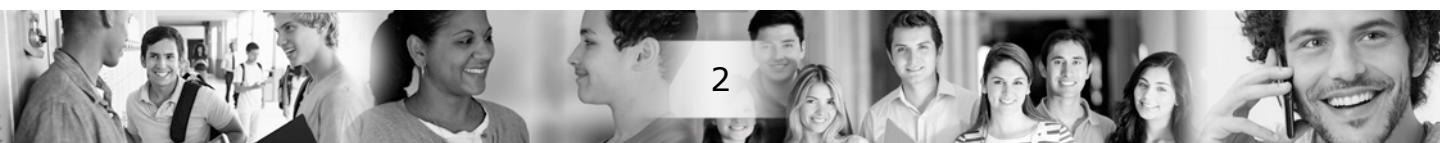

Client: Great! Where did it come from?

Presenter: The Gantt chart was actually designed by the polish economist Karol Adamiecki in 1896. He called his chart harmonogram, and became very famous in Poland and Russia, but due to the language, the chart only became famous in other countries when the American Henry Gantt created his own version in the 1910's; his chart was the evolution of Adamiecki's harmonogram. Nowadays, Gantt charts are a common charting technique, but when they first appeared, people considered them revolutionary.

Client: I'm definitely using a Gantt chart for my next project!

Presenter: I'm positive that Gantt charts are helping many businesses and people plan a number of tasks. You can surely use this tool to organize collected data and to schedule tasks for a project. If you were not able to organize activities in a given period of time, you can definitely do so now and also control the development of tasks and the progress of a project with the Gantt chart. It's very useful for information management.

Get your Gantt chart now and accomplish your projects successfully and on time!

Let's Practice!

Some characteristics of a Gantt chart.

Extension Activity

Creating my own Gantt chart.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about Gantt charts.
- Create a simple project with a specific outcome to establish the tasks.
- Create a Gantt chart in a poster showing tasks for a month.
- Show your final product to your partners and instructor.

Self-Assessment

Yes No

- I search more information about Gantt charts. ☐ ☐
- I list some tasks for a month. ☐ ☐
- I make a poster with a Gantt chart with tasks for a month. ☐ ☐
- I show my poster and explain it to my partners and instructor. ☐ ☐

Target Words

- due time** (noun): the designated date to present or deliver a piece of work or to complete a task
e.g. In the past, Gantt charts only summarized the elements of a project, while modern charts show the expected time for a task to finish; the optimistic, realistic, and pessimistic due time; the relation among tasks and their progress in percentages.
- accomplish** (verb): to achieve one's goals
e.g. Get your Gantt chart now and accomplish your projects successfully and on time!
- seem** (verb): to look like
e.g. Are you working on a project, but you seem to have problems planning and organizing your work?
- successfully** (adv.): to triumph achieving a goal
e.g. Get your Gantt chart now and accomplish your projects successfully and on time!
- deadline** (noun): the final chance to deliver a piece of work
e.g. We can use Gantt charts to organize the tasks for a project's schedule, they include the starting point and the deadline of the tasks.
- achieve** (verb): to reach or to obtain something
e.g. A Gantt chart organizes every single task required to achieve the goal of a project in a diagram.

Learning Points

Simple Present Vs. Simple Past with Regular and Irregular Verbs.

We use the **simple past** to talk about actions that happened and finished at some point in the past; and the **simple present** to talk about actions that are generally true or that occur at the present moment.

SIMPLE PRESENT

We use the simple present to talk about general truths or how something usually takes place. Regular verbs in **simple present** change their form when referring to the third person singular.

No third person singular

eat
talk
transfer

Third person singular

eats
talks
transfers

There are some irregular verbs in simple present.

Have/Has
Is/Am/Are
Do/Does
Go/Goes

SIMPLE PAST

We form the **simple past** in affirmative sentences by adding '-ed' at the end if the verb is regular.

Example:

*Last week the analyst **sorted** the requirements.*

Most verbs in **simple past** are regular. But there is a considerable number, especially among those verbs we use more frequently, that do not form their simple past tense by adding '-ed' at the end of the verb. Even though there are some regular patters for forming some **irregular verbs**, you have to learn many of them by heart.

Simple Present

Do
Go
Drive
Run

Simple Past

Did
Went
Drove
Ran

Learning Points

CONTRAST

We can use **simple present** and **simple past** to make a **contrast** between how something was or occurred in the past and how that is or takes place now. When we want to contrast the two tenses, we are usually going to use time expressions to indicate at what time each action takes place.

Examples:

We **worked** with a very basic software **last year**, **now** we **use** a more advanced version and we are doing much better.

We **didn't use** Gantt charts **before**, **now** we **organize** different tasks much faster by using them.

In the chart below there are some common irregular verbs.

Common irregular verbs	
Present	Past
say	said
make	made
go	went
take	took
come	came
see	saw
know	knew
get	got
give	gave
find	found
think	thought

Examples

- In the past, Gantt charts only summarized the elements of a project, modern charts also show the expected time for a task to finish.
- Nowadays Gantt charts are a common charting technique, but when they first appeared, they were considered revolutionary.
- The Gantt chart was actually designed by the polish economist Karol Adamiecki in 1896.

Learning Points

Types of Charts: Comparison/Relationship Charts.

You use **charts** to communicate and express data clearly.

You choose a specific type of chart depending on the kind of information you want to show, and how you want to show it. There are charts to state comparison relationships, flow/process, or location.

Comparison relationships: You use this type of charts to contrast two or more variables. Some of the most common charts used in comparison are line graphs, bar charts, and Venn diagrams.

Flow/process: You use flow charts to show the development of a process.

Location: You can, naturally, show location with location charts.

Example

- *Gantt charts consist of a bar chart expressing the work break down structure of a project.*
