Let's Start!

Understanding Software Requirements.

Learning Outcome:

Describe common activities at work using short sentences in familiar spoken and written situations.

Interpret the requirements report to determine the technological needs in managing information, based on rules and protocols established by the company.

Can Do Statements:

- I can talk about software requirement at a specific place.
- I can explain why software is required by a company.
- I can give examples of software requirements.

Ask your partner:

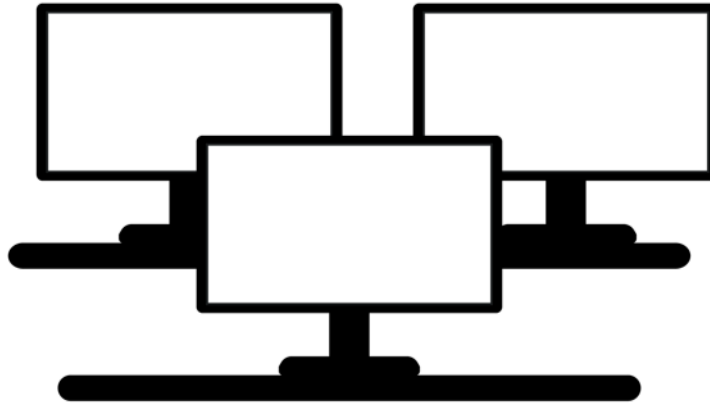

- Why do you think companies invest in software design?
- What do you think are the most common software requirements? Why?

Let's Explore!

Why is software design important for companies?

Instructions: Read the text below.

Molly: Hi, Tom! What are you doing?

Tom: Hi, Molly! I'm backing up the software requirement files for the eco-bikes company. I don't want my computer to wipe out that extremely important information.

Molly: I don't understand why companies tangle in those complicated software systems.

Tom: Why do they tangle? Well, software systems facilitate the mission of the companies, that's why companies invest in software design. The idea is not to burden workers unnecessarily but to diminish their time for performance. And, in the same way, to improve customer service and increase their income.

Molly: Why does eco-bikes need a software?

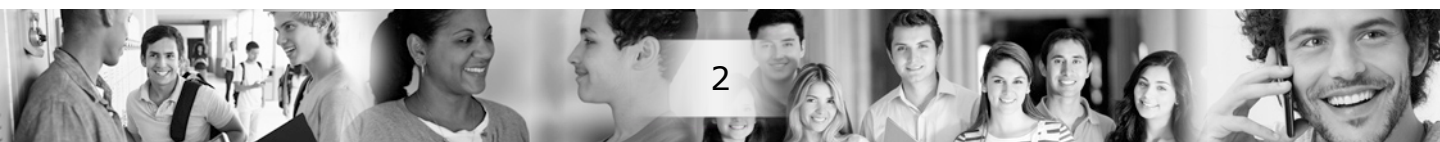

Tom: They need a software to track bicycles in case they are stolen, and also to store routes that the bike users discover. They want to create a network of eco-bikers in the country to become well-known, so they establish the company as a major bike provider.

Molly: And, what are you doing for the eco-bikes project now?

Tom: Well, as I'm the analyst, I have to describe the features and functionalities of the 'target system, more specifically the requirements for the eco-bikes system. Also, I need to collect, analyze, and document the clients' requirements to make sure the project is feasible.

Molly: What requirements are they demanding?

Tom: There are several types of requirements, as in every project. For example, they have special design requirements. The system has to be easy to use so users like it. They have lots of customer requirements because the software has to be consistent with the vision of the company; that is to say, to generate environmentally friendly products. There are lots of facilities they want to include in the software; some of them include chat, maps, route planning, and timing. As you can see, their functional requirements are very demanding.

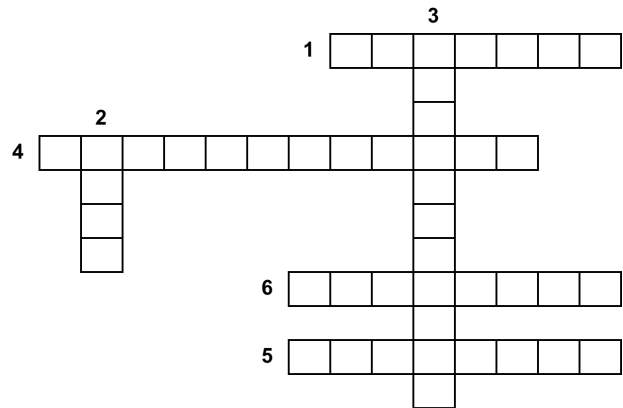

Let's Practice!

Companies demand different kinds of software.

Instructions: Read the clues. Complete the crossword.

1. Tom decided to make a backup of the software requirement _____ in the company.
2. The _____ has to be easy to use so users like it.
3. The software has to be _____ with the vision of the company.
4. The functional _____ are very demanding. So we need to work really hard.
5. There are lots of facilities they want to include in the software, as chat, maps, route _____, and timing.
6. As I'm the analyst, I have to describe the _____ and functionalities of the target system.

Let's Practice!

Software work for all types of companies.

Instructions: Select the correct answer.

1. Nowadays many companies _____ to facilitate their work.
 - a. needs to adapt their software
 - b. need to adapt their software
 - c. needing to adapt their software
 - d. need adapting
2. This year our company _____ a new software design.
 - a. began to implement
 - b. begging to implement
 - c. began to implementing
 - d. begun to implement
3. Our company _____ workers' time, for that reason we want to invest in software design.
 - a. have to diminish its
 - b. have to diminish their
 - c. has to diminish our
 - d. has diminishing our
4. We _____ income, so we are using a new software design.
 - a. wants to improve our
 - b. want to improve our
 - c. want to improving our
 - d. wanting to improve our
5. And their functional requirements are very demanding, there are lots of facilities they _____ the software, as chat, maps, route planning, and timing.
 - a. wants to implement in
 - b. to want to include in
 - c. want to include in
 - d. want including
6. Every project _____ several types of requirements.
 - a. have to have
 - b. has to has
 - c. has to have
 - d. have to has

Extension Activity

Using Your Own Software.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about software requirement.
- Imagine that you are creating your own company, think about what types of software requirements you will need.
- Prepare a short presentation about it.
- Use the grammar and vocabulary you studied in this lesson.
- Present your work to your classmates and teacher.

Self-Assessment

	Yes	No
1. I research about different software requirements.	☐	☐
2. I select the types of software that a company will need.	☐	☐
3. I prepare a presentation to show this information.	☐	☐
4. I use the grammar and vocabulary I learned in class.	☐	☐
5. I talk about software requirements for a company in front of my class.	☐	☐

Target Words

- **tangle** (verb): to complicate something
e.g. I don't understand why companies tangle in those complicated software systems.
- **burden** (verb): to pressure someone to do more than he or she can do
e.g. The idea is not to burden workers unnecessarily but to diminish their time for performance.
- **well-known** (adjective): famous, popular
e.g. They want to create a network of eco-bikers in the country to become well-known.
- **feasible** (adjective): when something is possible to achieve
e.g. I need to collect, analyze, and document the clients' requirements to make sure the project is feasible.
- **demanding** (adjective): rigorous, hard
e.g. As you can see, their functional requirements are very demanding.
- **income** (noun): the money a company earns
e.g. We need to implement a software system to improve customer service and increase their income.

Learning Points

Questions with Simple Present and Questions with Present Continuous.

You use different grammar structures when asking **questions** in the **simple present tense** and in the **present continuous tense**.

Look at the chart below:

Simple Present Tense Interrogative Form	Present Continuous Tense Interrogative Form
When you need to ask a yes/no question, you use this structure: Auxiliary verb Do/Does + subject + Main verb in base form + complement + ? Example: Do you need a new software system? Yes, I do. / Yes, I need a new software system. No, I don't. / No, I don't need a new software system. As you can see, regarding short answers, you use the same auxiliary verb (do/does). On the other hand, when you need to ask an information question (Wh-question), you use this structure: Wh-question + auxiliary verb Do/Does + subject + Main verb in base form + complement + ? Example: Why do you need a new software system? Because I need to gather my clients' information in a better way. In this case, your answer can't be short since you need to give information about it. So you never answer with the auxiliary verb (do/does).	When you need to ask a yes/no question, you use this structure: Auxiliary verb To be + subject + Main verb + ing + complement + ? Example: Are you sorting the requirements now? Yes, I am. / Yes, I am sorting the requirements now. No, I'm not. / No, I'm not sorting the requirements now. As you can see, regarding short answers, you use the auxiliary verb to be. On the other hand, when you need to ask an information question (Wh-question), you use this structure: Wh-question + auxiliary verb To be + subject + Main verb + ing + complement + ? Example: What type of requirements are you sorting? I am sorting functional and non-functional requirements. In this case, your answer can't be short since you need to give information about it.

Examples

- What are you doing?
- Why do they tangle?
- Why does eco-bikes need a software?
- What requirements are they demanding?

Learning Points

Expressions Related to Software.

Expressions are phrases we frequently use in our daily life.

When talking about software and computing, we can find several expressions that are commonly used in these fields. Learning expressions of that type help us to understand and communicate better with our coworkers.

In the chart below there are some common expressions you need to learn if you work with software and computing.

Expression	Meaning
<i>Back up your files</i>	To make a support copy of your information.
<i>Run out of room</i>	When you don't have more space left.
<i>Put your backups in a safe place</i>	Store your support copies where you won't miss them.
<i>Hack into the network</i>	To enter the network with no allowance.
Wipe out the information	To clean your storage device by erasing information.

Examples

- *I'm making a back-up of the software requirement files for the eco-bikes company.*
- *I don't want my computer to wipe out that extremely important information.*
