Let's Start!

How to Create a Gantt Chart: Step 2.

Learning Outcome:

Describe common activities at work to a using short sentences in familiar spoken and written situations.

Interpret the requirements report to determine the technological needs in managing information, based on rules and protocols established by the company.

Can Do Statements:

- I can explain how to create a Gantt chart by following the second step.
- I can describe what task relationships are.
- I can identify vocabulary related to the step 2 to create a Gantt chart.

Ask your partner:

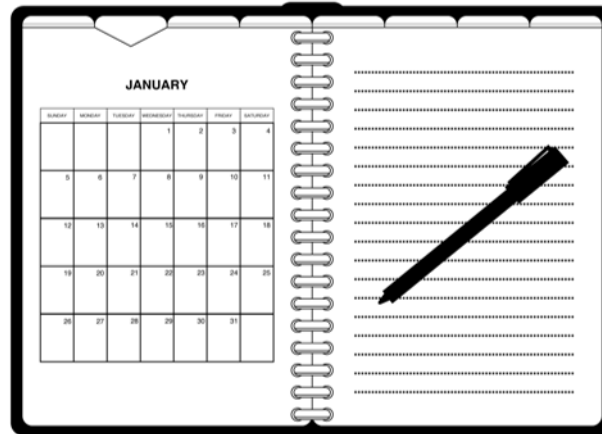

- Which steps do you know to create a Gantt chart? Explain.
- What are suitable tasks in a project to put in a Gantt chart? Give examples.

Let's Explore!

The presenter explains the next step to create a Gantt chart.

Instructions: Read the text below.

Welcome to the second part of how to devise a Gantt chart. We already consolidated our tasks in step one. In step two, we always have to correlate them in order to organize our schedule; this is going to help us to define the time each task is going to take. In this step, we are also going to identify task relationships and merge them in order to set our Gantt chart. First, you need to remember that there are always tandem activities that we have to complete, and there are also assignments we can perform at the same time.

The ones that follow one another are called sequential because we can never start one without finishing the other since they depend on each other. On the other hand, the detached activities are called parallel. This means that we can sometimes work on two or more assignments at the same time without affecting any process. In order to consolidate our sequential tasks, we are going to write down next to each activity the letter S or P to differentiate sequential from parallel. We always write the number or letter of the assignment in which the sequential activities rely on, so we usually have two columns next to each task where we write the type and the bonds it has with the others. We sometimes use some acronyms to express the kind of relationships among these activities.

Let's identify this vocabulary to use the acronyms in our chart. We use FS (finish to start) in front of a task to state that another task has to be totally completed to begin with this one. SS (start to start) means that an assignment cannot start until another activity does. FF (finish to finish) means a task cannot finish until another one does. Finally, use SF to express that a task cannot finish until another one starts; however, this is not very common in use.

Remember always to use these acronyms to define the kind of relations among your activities.

**Let's Practice!**

Creating a Gantt Chart Following the Second Step.

Instructions: Match the sentence halves from Column A with the endings in Column B.

COLUMN A

1. In the second step, you
2. To continue with the process of devising a Gantt chart,
3. Completing tandem activities is important
4. In some cases, there are assignments that

COLUMN B

- a. we need to identify and merge tasks relationships.
- b. you can perform simultaneously to save time.
- c. to comply with the process and make it work.
- d. have to correlate the tasks to organize a schedule.

**Let's Practice!**

Enrich your vocabulary!

Instructions: Select the correct option to complete the sentences.

1. We always need _____ activities in order to complete certain tasks.
 - a. differentiated
 - b. tandem
 - c. similar
 - d. educational
2. We can perform some of the _____ at the same time.
 - a. goals
 - b. objectives
 - c. duties
 - d. assignments
3. Activities that follow others are called _____ activities.
 - a. sequential
 - b. similar
 - c. parallel
 - d. regular
4. We can sometimes work on two or more tasks at the same time. These activities are called _____.
 - a. regular
 - b. parallel
 - c. sequential
 - d. separated
5. In order to _____ our tasks, we need to design a chart that contains the tasks, the length, the type of activity and its dependency.
 - a. create
 - b. draw
 - c. collect
 - d. correlate
6. We need to take into account some acronyms to find some relationships among the activities in the chart. These are: _____.
 - a. F, S, FF, SF
 - b. FS, SS, FSS, SF
 - c. FS, SS, FF, SF
 - d. AS, FS, SS, SF

Extension Activity

Practicing and Building your Vocabulary about Gantt Charts.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Explore more about the second step to create a Gantt chart.
- Invent a dialogue with about 120 words using vocabulary taken from the lesson.
- Read your dialogue aloud and check your pronunciation with your instructor.

Self-Assessment

Yes

No

- I find more information about the topic.
- I create a dialogue taken vocabulary from the lesson.
- I read my dialogue and check my pronunciation with my instructor.

☐ ☐
☐ ☐
☐ ☐

Target Words

- **merge** (verb): to join, to link
e.g. In step number two we are going to identify task relationships and merge them.
- **tandem** (adjective): one after the other
e.g. There are always tandem activities we need to complete.
- **detached** (adjective): not linked to something else
e.g. The detached activities are called parallel.
- **assignment** (noun): task
e.g. There are also assignments we can perform at the same time.
- **rely on** (phrasal verb): to depend on
e.g. We always write the number or letter of the assignment in which the sequential activities rely on.
- **bond** (noun): connection
e.g. We write the type, and the bonds it has with the others.

Learning Points

Infinitives of Purpose and Simple Present Tense with Frequency Adverbs.

You can use the simple present tense with frequency adverbs to express how often a subject performs an action. In addition, you can add an infinitive of purpose in order to specify the intention you have when performing the action.

There are two kinds of **frequency adverbs: definite** and **indefinite** frequency adverbs. Definite adverbs express a specific moment while the others do not say exactly the moment the subject performs the action.

Indefinite frequency adverbs are usually placed between the subject and the verb.

For example:

*I **always** design a Gantt chart for my projects.*
*He **never** finishes the tasks on time.*

Definite adverbs usually go at the end of the statement.

For example:

We check our schedule **every day**.

You can also recognize definite and indefinite frequency adverbs because the definite ones are usually longer than the indefinite ones.

With regard to the infinitive of purpose, add to + **verb** or **in order** to + **verb** so that you make the intention of your action clear.

For example:

*Before starting our projects, we always design a Gantt chart **to associate** the tasks and ensure its completion.*

*Before starting our projects, we always design a Gantt chart **in order to associate** the tasks and ensure its completion.*

Examples

- *In this step, we are also going to identify task relationships and merge them in order to set our Gantt chart.*
- *In order to consolidate our sequential tasks, we are going to write down next to each activity the letter S or P to differentiate sequential from parallel.*
- *We sometimes use some acronyms to express the kind of relationships among these activities.*

Learning Points

Types of Charts: Charts to Show Trends.

Charts are a great way to explain information in a simple and organized way.

There are certain types of charts to show tendencies found in your data. For example, bar charts and line graphs show these trends.

You can use certain charts to express trends; however, the best way to show patterns is using the line charts. These charts are useful when representing data that continually changes with time. In order to show data in a line chart, use a group of markers, or data points, and link them using straight line segments. Look at the following image of how a line chart looks:

Example

- *Let's identify this vocabulary to use the acronyms in our chart.*
